

Help Restore Our Burned Forests

Millions of acres damaged by wildfire urgently need native trees to prevent erosion and provide habitat for wildlife. These trees will purify our water, clean the air we breathe, and sequester climate-changing carbon dioxide for generations to come.

You can help restore wildfire-damaged forest ecosystems through **Wildfire ReLeaf**. The USDA Forest Service matches every tree planted, tree-for tree, which means your \$25 donation plants 50 native trees in an area burned by destructive wildfire.

Every dollar plants two trees.
